

Symphony & Symphony-i

Advanced User Interface

Honeywell's Symphony family of display products lets you provide your residential and commercial customers with the most exciting new experience in security, convenience and control. The graphic touchscreen display simplifies system operation and provides easy, centralized fingertip control for a variety of daily tasks.

Symphony goes beyond the conventional keypad, letting your customers add real security to their homes and businesses while enjoying lifestyle-enhancing benefits they won't find anywhere else.

By simply following the graphics and menu-driven prompts on the bright, uncluttered touchscreen, security system operation is crystal clear – without any complicated commands to remember or blinking lights to interpret.

Symphony can also provide local lighting and appliance control. An optional Data Services package lets end-users display a variety of Internet content such as news, stock quotes, weather, horoscopes and sports scores.

Family members can even have their own personalized screens to view e-mail headers and receive customized information.

In commercial settings the easy-to-use touchscreen reduces training time and can provide owners and managers with vital details about their business.

The Data Services package also includes the ability to completely control the security system and Symphony remotely over the Internet with an ordinary web browser. When using the Internet for alarm reporting, the Symphony-i version should be ordered.

FEATURES

Event Log

Symphony conveniently stores the most recent actions involving system use. A press on the touchscreen is all it takes to access the event log, letting users easily:

- View when the system was used and who used it
- Track when workers and temporary guests use the system
- Keep tabs on family members (i.e., checking if a child has armed the system upon returning home from school)
- Utilize Symphony as an effective business management tool (i.e., viewing openings and closings)
